

# Brussels sprouts

# Brussels sprouts

F1 hybrid

## Gustus\*

### Benefits

#### Producer/Grower

- Excellent early variety with good yields
- Suitable for machine harvesting
- Ideal position pre-Abacus

#### Distributors/Consumers

- Uniform grade
- Good quality

## Abacus\*

### Benefits

#### Producer/Grower

- Early hybrid developed for machine harvesting
- Good standing ability
- Combines earliness with uniform cylindrical button development
- Suitable for February sowings and autumn sown over-wintered young plants

#### Distributors/Consumers

- Very uniform button quality and grading

\*Note – both Gustus and Abacus are sensitive to bolting and should not be planted before the 25th April

## Maximus

### Benefits

#### Producer/Grower

- Leading quality variety for early and mid-season machine harvesting
- Offers a wide harvest window
- From successive plantings made in April/May, it can be used throughout the entire mid-season period

#### Distributors/Consumers

- Outstanding button quality

## Cobus

### Benefits

#### Producer/Grower

- High yielding, high quality variety
- Suitable for November and December production
- Excellent holding ability and disease tolerance
- Outstanding results in small commercial trials
- Strong against lodging

#### Distributors/Consumers

- Excellent button quality
- Very attractive in appearance, with the contrast of a small butt with dark base leaves

## Titus

### Benefits

#### Producer/Grower

- 180 day maturity with very good vigour
- Excellent field standing ability
- Excellent de-leafing
- More cylindrical setting

#### Distributors/Consumers

- Outstanding uniform button quality
- Smooth button for fresh market

## Crispus

### Benefits

#### Producer/Grower

- Sturdy plant
- Growing reliability due to its high Club Root resistance
- Mid-early variety

#### Distributors/Consumers

- Ideal for fresh market
- Smooth, good quality buttons and small butt

## Aurelius

### Benefits

#### Producer/Grower

- Ideal for the Christmas harvest period
- Strong against lodging with excellent holding ability

#### Distributors/Consumers

- Very uniform button quality and grading

## Clodius

### Benefits

#### Producer/Grower

- Capable of sustaining a very long harvest window
- Medium height and late mid-season cycle
- Can be machine harvested from December through to mid-February from plantings made from early to late May
- Strong against disease
- Outstanding holding ability

#### Distributors/Consumers

- A very mild taste

## Petrus

### Benefits

#### Producer/Grower

- Suitable for late harvests in the mid-Winter period of January and February
- Produces a uniform high yield
- Good frost tolerance and holding ability
- Excellent variety for Scotland

#### Distributors/Consumers

- Attractive buttons
